

OUR SERVICES

NEXT GENERATION DEEP CLEANSING
& INFECTION CONTROL SOLUTIONS

Endo Enterprises are specialists in both drinking water and process water hygiene and treatment, providing a full consultancy and solutions package from source to outlet.

Legionella Control

Legionella is a ubiquitous, naturally occurring bacterium. Colonies of Legionella can breed in various types of water storage and domestic water systems, such as those found in care homes, hospitals, schools and commercial buildings.

The H&SE believe legionnaire's disease is preventable and will therefore prosecute if there is an outbreak and will put a prohibition notice on any property they visit where they ask for a risk assessment and one cannot be provided.

EndoSan™

- Non-toxic, safe and easy to use
- Odourless, colourless, tasteless
- Safe to foodstuffs & fully biodegradable
- HACCP compliant biofilm remover
- No undesirable side-effects
- Broad-spectrum multipurpose disinfectant
- Bacterial and virucidal agent
- Highly effective in Legionella control

'CONSTANT DOSING' SYSTEM

Endo AOT (Advanced Oxidative Technology) can be constantly dosed into any water system eliminating the need to heat water to 60°C, the recommended temperature for Legionella control.

Following risk assessment in compliance with L8, many Water Treatment Facilities and Estates Management Groups now utilise Endo 'AOT' and our Constant Dosing system as the preferred method of Legionella control in healthcare and public buildings throughout the UK.

FEATURES

- Proven, substantial energy saving on water heating
- Completely sterilises water without the use of harmful chemicals such as Chlorine
- L8 legislation compliant protecting your responsible person
- Prevents serious infectious diseases including MRSA, E-Coli, Legionella, C-dif
- Eliminates the need to clean showerheads, taps or monitor water temp throughout buildings

Water Treatment Services

Endo Enterprises offer a service to clients that will assess, analyse, record and report on the condition of water systems being used in process or operational environments. These include building services, air conditioning, mains water, swimming pools, spas and many other areas with water.

Our Advanced Oxidative Technology and innovative Constant Dosing System is also providing cleansing and ongoing protection of water systems used in Fish Farming, Cosmetics, Transport and Food & Beverage industries.

WATER TREATMENT SERVICES

Filtration
Softeners
Reverse osmosis and membrane technology
De-ionisation
pH correction
Turbidity removal
Disinfection units
Skid-mounted schemes
Safe for all indoor environments
No building occupant exposure concern
Broad spectrum antimicrobial performance (gram+/-bacteria, fungi, algae)

Used successfully by:

AGRICULTURE & FISHERIES
HOSPITALS & HEALTHCARE
TOURISM & LEISURE

INDUSTRY & COMMERCE
FOOD & DRINK INDUSTRIES
TRANSPORT & LOGISTICS

EndoSan™

No undesirable side-effects

Broad-spectrum multipurpose disinfectant

Proven biofilm remover

Bacterial and virucidal agent

Highly effective in Legionella control

Non-toxic

Odourless, colourless, tasteless

Safe and easy to use

Safe to foodstuffs & fully biodegradable

HACCP compliant

WATER TREATMENT SERVICES

Complete Air Sanitisation

It's free, it's all around us and we can't live without it for more than a few minutes, but we often take the air we breathe for granted.

Air pollution is an umbrella term for airborne chemicals, particulate matter and biological materials that have a negative impact on human health.

Endo Enterprises and its global partners, have developed a enviable range of Super Hydroxyl Air Sanitisers. These units sanitise our breathing air therefore improving air quality by substantially reducing bio contaminants contained within.

HIGHLY EFFECTIVE WALL MOUNTED / INDUCT / DESKTOP SOLUTIONS TO

Airborne allergies

Sick Building syndrome

Respiratory Problems

Infection and Legionnaire control

Airborne Viral and Bacterial contaminants

The Endo ASU range of products exhibit our unique Self Sanitising Technology (SST) and can be installed into any environment. From our wall mounted washroom units with innovative in-built power supply to our next generation induct models for use within your buildings HVAC system. All of our products are now MHRA registered Medical Devices and generate a continuous stream of beneficial superoxides, derived from ambient moisture in the air.

Used successfully by:

HOSPITALS

NURSING HOMES

DAY CARE CENTRES

SCHOOLS

COMMERCIAL BUILDINGS

FOOD PROCESSING PLANTS

RESIDENTIAL STRUCTURES

PHARMACEUTICAL PLANTS

LABORATORIES

HOTELS & RESTAURANTS

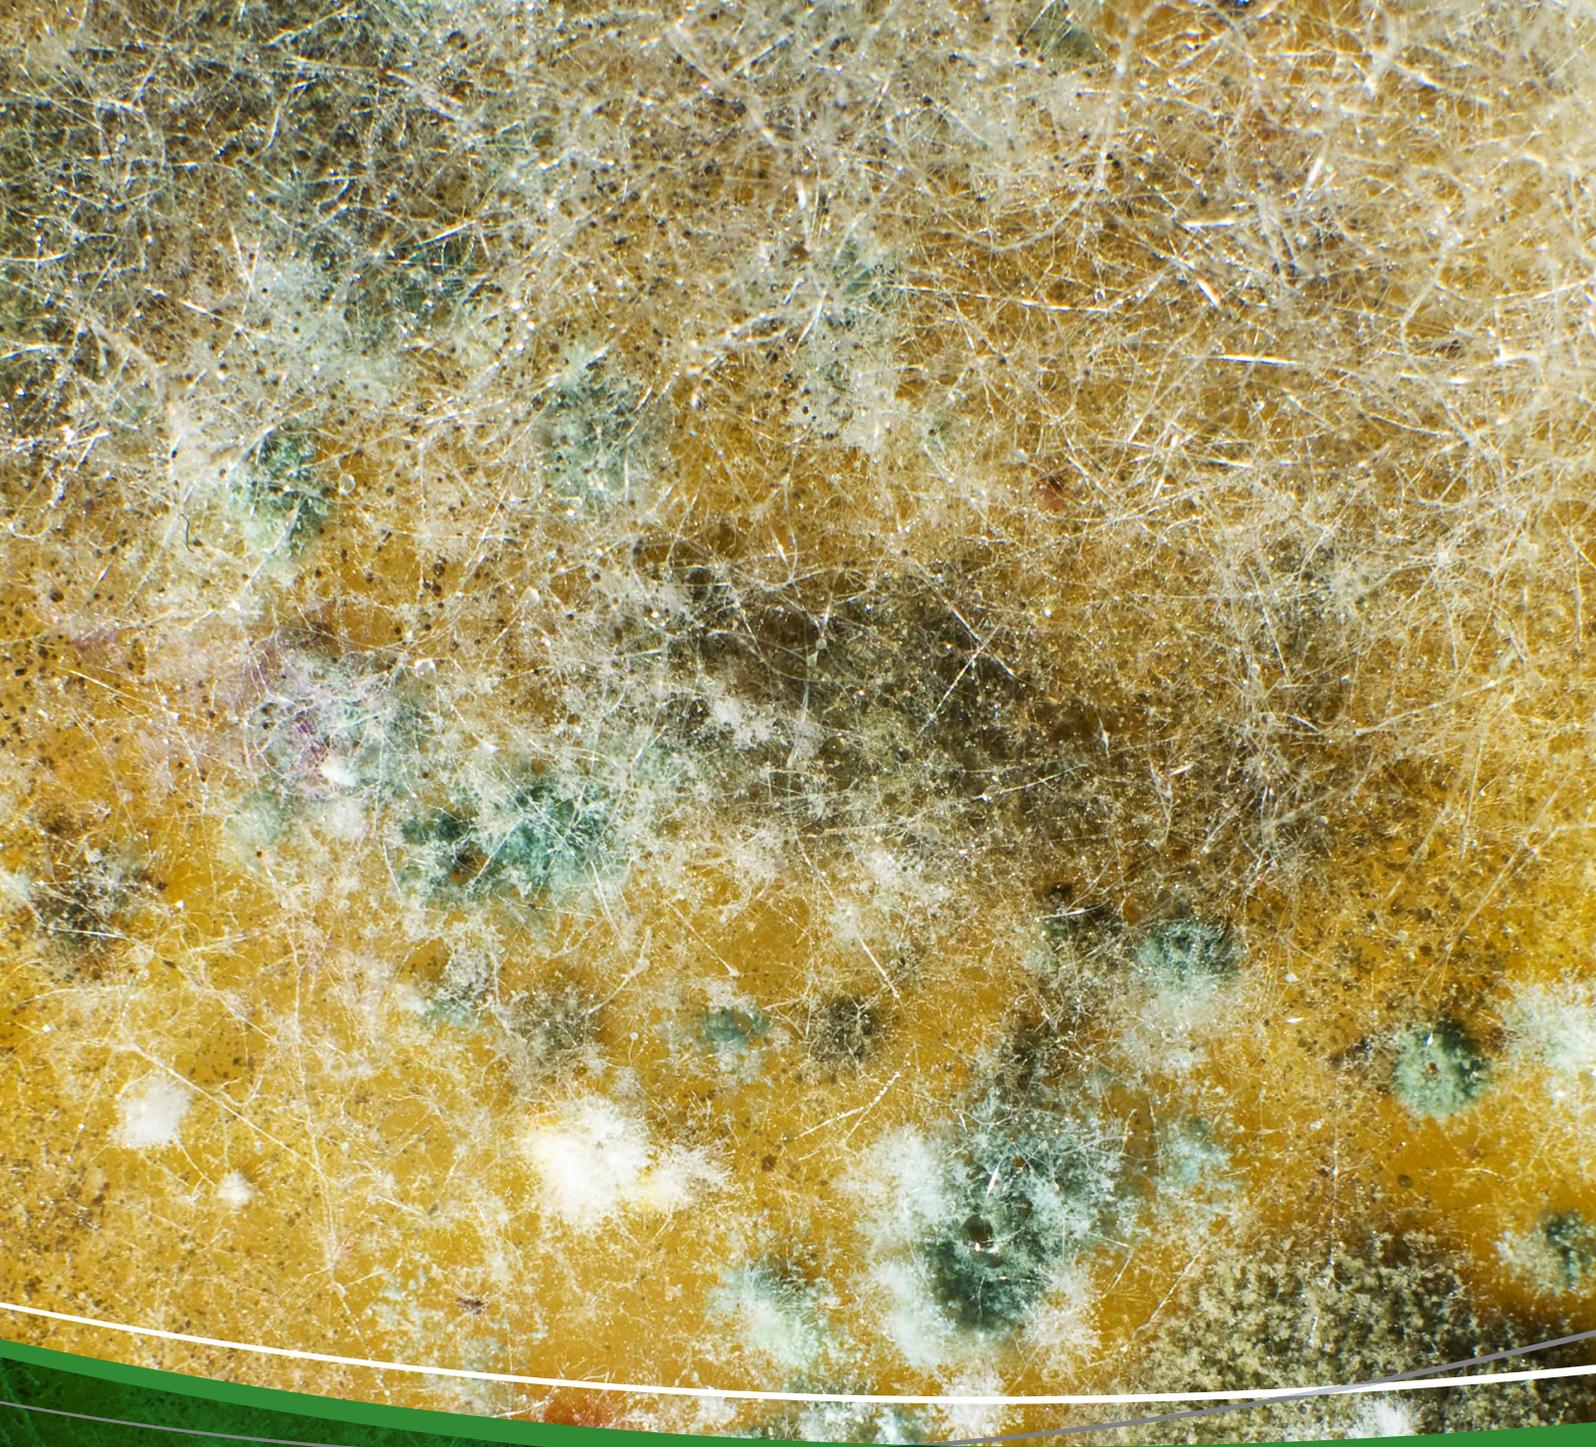

STORAGE FACILITIES

GOVERNMENT & MOD

Self Sanitising Technology (SST), in infection prevention control is a reality. It represents a quantum leap in infection prevention and control that resolves the imperfections of traditional protocols.

COMPLETE AIR SANITISATION

The British Medical Journal report, Damp Housing, Mould Growth and Symptomatic Health State 24/6/89, confirms that active spores, even in small concentrations both surface and airborne, are highly detrimental to the health and well being of both adults and children.

Mould Abatement Service

Every building, irrespective of its construction, potentially contains within its fabric mould spores which are dormant and completely harmless. However, given the right conditions these spores will germinate resulting in extensive growths of black disfiguring mould.

Mould needs very little nutrient and will grow on walls and ceilings irrespective of the decorative finish. Mould spores will also spread into the air which is a serious HEALTH RISK, and give off an obnoxious musty smell. Clothes, furnishings and carpets can also be destroyed by unsightly mould.

Endo Enterprises Mould removal protocols and solutions can also be used to treat Textiles for use in Clothing, Furniture, Homewares and can be added to many other product ranges to create Anti Mould paints & coatings etc.

DESTROYED / CLEANED / PROTECTED

Our leading edge technologies solve mould outbreaks in 3 easy steps:

1. Firstly, we kill the Biofilm that causes the mould.
2. Secondly, we disinfect the area with our Next Generation Solutions.
3. Finally, we apply our positively charged Antimicrobial coating.

Endo Enterprises 1, 2, 3 New Era IPIC mould abatement protocol, will completely eradicate mould outbreaks. Our unique method of dealing with the problem means not only will you be mould free, but it will never come back.

Medical Grade Infection Control

Healthcare-associated infections (HAIs) are one of the most pressing issues facing our health services today.

According to the Department of Health one in ten patients acquires a HAI, and those who do contract an infection stay in hospital nearly three times longer than ordinary patients, placing tremendous financial pressure on our already strapped-for-cash health services.

A combinational cost effective, sustainable system that provides continuous antimicrobial performance and continuous air purification effectiveness. A high level of antimicrobial control is achieved in all cases without employing harmful toxins, poisons, corrosive or volatile chemistries.

CONTINUED SUSTAINED SURFACE DISINFECTION

On surfaces, equipment, uniforms, emergency vehicles, beds, upholstery and HVAC.

PROVEN RESULTS AGAINST

MRSA & C.Diff

Staphylococcus

Salmonella

Pseudomonas

Type 2 Herpes

Mycobacterium tuberculosis

Influenza A2

Hong Kong Virus

SARS & H5N1 Bird Flu

E.Coli

Legionella

Mould & Mildew

Pathogenic Fungi

EndoSan™

1. CLEAN

Complete removal of dirt, debris and bio film from surfaces and registered as a class II medical device.

EndoQuat™

2. DISINFECT

Next Generation disinfection technology with total germ kill within 10 minutes.

EndoStat™

3. PROTECT

The only EPA approved superior bonded biostatic, durable, antimicrobial surface treatment.
